

Mobile Handset Tracking Solutions

Highlights

- Real-time Monitoring
- Quick Location Updates
- Definable User Locations

Sustained Innovation in Telematics

Duty of Care is an increasingly important aspect of corporate responsibility.

If you need to take action to safeguard the operations of your workforce out in the field, then a new development by Causeway Telematics gives you insight into the whereabouts and continued wellbeing of your people via a Blackberry or any Windows mobile PDA.

Manage your risk effectively from your PC with this latest high performance facility, giving access to:-

- Real-time monitoring - instant location of assets
- 60 second location updates
- Street level mapping
- Live feedback

In addition, a panic alarm facility provides constant lone worker protection and employee security, mitigating responsibilities under Health and Safety legislation.

Operated via the reliable, high performance Causeway technology, PDA tracking provides you with the 'where, when, and how' of each unit on a minute by minute basis, also

integrating to back office solutions where required for effective reporting and journey replay capabilities.

- Definable user locations and activity zones to indicate when the device enters any predefined area
- Integration to back office bespoke solutions where required

Today's advanced Telematics systems are providing employers nationwide with accurate, secure, and manageable solutions for cost effective tracking and monitoring.

- Constantly evolving, future proofed and scalable solutions
- Addressing security and risk management issues
- Affordable, commercial solutions designed around individual customer requirements.
