

sustainability iQ

Sustainability iQ is the world's first truly auditable management system for sustainability and CSR.

It harvests, validates and publishes all the data needed to formulate and implement a sustainability/CSR policy.

sustainability iQ

Sustainability iQ is a web based hosted solution with a single software platform to manage energy and carbon emission reductions, waste, recycling and transport - both within organisations and across the supply chain.

Accurate, flexible reporting - enabling you to make the informed decisions that are crucial to implementing your sustainability/CSR policy.

strategic benefits

- ▶▶ Fully auditable management system ensures your data stands up to external audit.
- ▶▶ Total 'end to end' solution - supports your whole sustainability/CSR policy and carbon reduction programmes.
- ▶▶ 7 different levels of reporting from global and country to building and business unit – saves time and shows relative performance.
- ▶▶ Powerful tools for managing and reporting on all necessary data for CRC (EES) – ensures legal compliance.

tactical benefits

- ▶▶ Financial & usage tracking supports trend analysis and forecasting – supports informed decision making.
- ▶▶ Accurate, flexible reporting that can be tailored to individual requirements – saving essential management time.
- ▶▶ Intelligent data processing – increases accuracy and reduces workload.
- ▶▶ Exception reporting – highlights key issues requiring prompt management action.

operational benefits

- ▶▶ Data processing tailored to each individual's job function (role-based) – reduced training needs.
- ▶▶ Data input – direct feed from other systems, spreadsheet upload and direct input – reduces time taken for data entry.
- ▶▶ Intuitive user interface – ensures ease of use.
- ▶▶ All stakeholders can 'comment' within the on-line system – providing real-time feedback.

The screenshot displays the Sustainability iQ software interface. At the top, it says 'sustainability iQ Sustainability Management. Simplified.' Below this, there are navigation tabs: 'Log Out', 'Configuration Manager', 'Data Validation', 'Digital Dashboard', and 'General Information'. The main content area is titled 'Data Management Console - Budget Costs' and shows a table with columns for 'Month' (Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec) and rows for 'Budget' and 'Actual' data. The table is organized into sections for '2007', '2008', and '2009', with sub-sections for 'Energy', 'Water', 'Waste', and 'Carbon'. The interface is clean and professional, with a green and blue color scheme.

Data can be **'locked-off'** at key stages within the process, similar to a financial accounting system. The result is that Sustainability iQ **delivers true 'sustainability accountability'** like no other solution on the market.

Sustainability iQ includes integration between consumption and financial data to provide an **instant overview of cost**, so that trends are fully visible to aid with analysis of performance and budgeting requirements.
