Manual processing of invoices wastes time, money and natural resources. Tradex eliminates waste and delivers significant savings.

A versatile range of solutions ensures that all Tradex users are able to take advantage of the following benefits:

- Flexible and easy to deploy
- Fully scalable
- Eliminates time wasted on manual processing
- Avoids waste
- Delivers cost and time savings
- Supports many document types
- Fully hosted
- Open connectivity with other hubs

**e-Invoicing**

Causeway’s Tradex eTrading solution enables supply chain partners to electronically send and receive trading documents such as invoices, requisitions and purchase orders. Once connected, companies can trade electronically through a scalable and flexible integration hub that supports multiple document types and user services.

Flexible and easy to deploy, it eliminates the inefficiencies associated with handling paper documents to deliver significant cost reductions in the management of supply chain transactions. Tradex provides secure ecommerce access to your suppliers and delivers real time-saving benefits within just a few days. Causeway will also help with rolling out the Tradex solution to your suppliers to ensure smooth implementation.

Tradex gives you access to the largest e-Invoicing community, with documents from over 20,000 companies being exchanged, together with open-connectivity with 3rd party hubs.

**E-Invoice Connection**

The open approach adopted by Causeway Tradex provides a wide range of connection options, making it easy to unlock the time, cost and environmental benefits of e-Invoicing. Where some customers or suppliers are already connected to another eTrading Hub, they can still use their existing connection to link through Tradex.

A Tradex Full Connection handles data conversion between the format you need and the many different formats required by your trading partners. The result is one connection for limitless partners. Alternatively, users may choose the Tradex Active option, which provides simple web-access to Tradex, allowing documents to be sent or received with all other Tradex users. Additional flexibility comes with Tradex PDF Convert, which is configurable to allow invoice data to be automatically extracted from a PDF and presented to your customer as an e-Invoice. Paper invoices are also handled easily, using Tradex Scan Link to convert paper to data to provide you with a 100% electronic process.

**Supplier Onboarding**

In addition to the range of connections supported by Tradex, Causeway also provides managed and automated onboarding services. These services allow suppliers to connect rapidly and to identify the approach that best meets their needs, making it easy to connect the maximum number of suppliers and reap the maximum benefits.

The managed onboarding process supports the objectives of both buyers and suppliers, ensuring the right connection is achieved quickly, with progress monitored at all times. Online guidance and links support each supplier in understanding the objectives of the onboarding process and how they can achieve a connection.

e-Invoice Exchange

Tradex allows organisations to exchange electronic trading documents between the many different back office systems in use today. The system supports a wide range of document types, including invoices, purchase orders, advance shipping notes, remittance advices and many more – with support for multiple currencies and tax requirements.

Shared services and rule-based workflow options ensure all users retain process control, improve visibility and drive efficiency. Data exchange options range from manual processes to fully automated and encrypted data transfer. They include Tradex Managed Email, which allows all outbound documents to be sent to trading partners electronically, whether they are using Tradex or not.

The Business Rules module allows automatic application of specific checks to documents, while the Approval Module enables manual checking within a fully electronic workflow.

Supply Chain Finance

Tradex provides an integrated finance solution that delivers a clear value proposition to buyers and suppliers – as well as to those providing finance. As such, it improves cash management, supply chain liquidity and supplier relationships within a flexible, simple to use and highly accessible framework. The Supply Chain Finance module can be used to convert trade receivables into cash in the bank to support business operations, sales growth and finance management. It also provides simple access to communities of buyers, suppliers and invoice details to support the provision of managed finance services. Tradex manages information from all parties centrally and provides a tailored
